FAX: 513/873-2736

### On the Covers

On the front cover, David Nolin (81 B.S.;  
84 M.S., Biological Sciences) studies the  
grasses of the Huffman Prairie, one of the  
largest tall grass prairies in the state.  
Nolin helped discover the prairie during his  
master's work at WSU, based on early  
1800s surveyor's notations. At the edge of  
the Wright-Patterson jet runways, the  
Huffman Prairie is now designated a state  
natural landmark. The back cover photo is  
a close-up of the prairie's flowers. Color  
photographs by Campus Photographer  
Jack Davis.

# Alumni Association hosts parents at reception

September 9 was the Big Day, the day a parent anticipates with mixed emotions: taking a child to college. There were both smiles and tears as 1,100 students moved into the WSU Residential Communities.

While students checked in, parents gathered at the Alumni Association reception, which offered refreshments, a chance to rest, and information about the new WSU Parent's Association. Whether it was their first or the fifth time taking a child to college, all parents were curious about their child's new home. Many signed up for the Parent's Association mailing list as a way to learn more about campus services and activities and be in touch with other WSU parents.

Among the most smiling parents at the reception were the many WSU alumni, proud to be bringing a second generation to campus. ▼

## ARC volunteers trained to recruit for WSU

Across the country, alumni volunteers are being trained to recruit students for WSU. Among the first Alumni Resource Center (ARC) volunteers were alumni from Chicago, Cincinnati, Columbus, Cleveland, and Washington, D.C.

Saturday morning workshops were held in these cities, led by Admissions Director Ken Davenport and Associate Director Nancy Mercier; Alumni Director Jim Dock and Assistant Kay Blue hosted the continental breakfast meetings.

The ARC volunteers received updates about WSU and were advised how to respond to typical questions asked by prospective students and their parents.

The volunteers will assist WSU Admissions staff at college fairs and high school visitations, and with individual prospective student contacts and follow-up.

The following ARC volunteers attended these area workshops:

### CHICAGO

Denise R. Anderson (78 M.S.)  
H. Patrick Covault, Ph.D. (75 B.S.; 77 M.S.)  
Robert W. Fausey (75 B.S.)  
Amy B. Hussman-Cronin (88 B.A.)  
Chris A. Murphy (78 B.S. Ed.)  
Ralph A. Nehrenz (80 B.S.)  
David L. Williams (89 M. Hum.)

### CINCINNATI

Louise Licata Hoelker (85 B.S.N.)  
Steven Slutzky (71 B.S.)  
Richard Winkler (86 B.A.)

### CLEVELAND

Joe G. Aber III (86 B.A., 88 M.B.A.)  
Kathleen Vivian Benson (73 B.S.Ed.)

### COLUMBUS

David E. Baird (82 B.S.)  
Ruth Bass (74 M.Ed.)  
James Hoying (81 B.A.)  
Greg Powers (88 B.A.)  
Elisabeth Righter (85 B.S., 89 M.D.)

## New service project to benefit Dayton area food bank

On May 19, the Wright State Student Alumni Assembly hosted the first Oozeball Tournament on our campus. In addition to being a fun-filled campus event, it raised funds for charity, donating the proceeds to The Other Place, a downtown Dayton daytime shelter for the homeless.

Working with The Other Place sensitized the SAA members to the plight of the poor and homeless. As a result, in addition to planning to continue the Oozeball Tournament annually as a charity event, the SAA is also working with the Alumni Association and Service America Corporation, the campus food service, to become a food donor for the American Red Cross Emergency Resource Bank (ERB), a local food bank program.

"It's rewarding as an adviser to see college students take such an interest in public service," commented Kay Blue, SAA Adviser.

The Emergency Resource Bank is dedicated to providing emergency food assistance to people in crisis situations. The ERB food bank acquires, warehouses, and distributes food to the existing network of 60 food pantries, shelters, and community kitchens in Montgomery, Greene, and Preble counties.

The Miami Valley, like many other regions, has a serious hunger problem. During 1989, over 1,600,000 meals were provided by area pantries, soup kitchens, and shelters.

Typically, the families receiving food from pantries are those who:

- have exhausted their unemployment benefits or have recently lost their jobs and are waiting for public assistance claims to be processed,
- are working in part-time or low paying jobs and must turn to the pantries for help when an emergency such as a medical problem results in an unmanageable financial burden, or

■ are receiving public assistance and an emergency comes up.

The Alumni Association has purchased containers for the safe transport of food from campus to the bank. Service America Corporation will donate the leftover food products.

The SAA in conjunction with the Alumni Relations office will provide the transportation of the food items to the resource bank.

Mike Loprete, WSU Director of Food Services, says, "Our employees will feel very good about helping out with this effort. It's good to know that food that might eventually be wasted will go to good purpose."

C. Jeanine Hufford, Resource Developer for the food bank, has visited WSU to initiate the project. She says, "Donations are turned around within 48 hours of receipt."

Food pantries are usually located in area churches or community centers; they provide people in need

with three days of food, up to four times a year, with the flexibility to exceed this guideline in special circumstances.

Volunteers operate the food pantries and distribute the emergency food to those in need based on referrals from area social service agencies.

Because WSU is expected to have a larger number of leftovers than smaller donors, Hufford projects that recipients will be the larger community kitchens and shelters such as Gospel Mission, House of Bread, Interdenominational Ministerial Alliance, St. Vincent Hotel, Salvation Army Booth House, and the Salvation Army Women & Children Shelter.

As a metropolitan university, Wright State has a focus on meeting the needs of its community. These new service projects are the Alumni Association's and Student Alumni Assembly's way of contributing to the greater Wright State and Miami Valley community. ▼

L to r: Elizabeth Good, Economy Linen and Towel Service, Inc; C. Jeanine Hufford, Resource Developer for Emergency Resource Bank, and Michael Loprete, Director of Food Services, review WSU's food service operation and discuss the details of Operation Food Share. Note: Economy Linen provides transportation for many of the food donors. SAA will provide transportation for WSU.

*The pros and cons of recycling, the consequences of eating a hamburger, the dangers of radiation, genetic engineering, waste management, and health care. These are just some of the reasons to study and understand biology, according to Dr. Randy Moore, chair of WSU's Biology Department.*

*This Alumnews Special Feature reports on the unique activities of two Biology program alumni and profiles the state-of-the-art teaching and research the Department offers today's students.*

# Protecting a 19th century prairie and managing 20th century natural resources

by Kay Blue

Jet engines whine and roar on the nearby runways, but David Nolin (81 B.S.; 84 M.S., Biological Sciences) is focused on the amber field dotted with golden oxeyes, home of bobolinks, upland sandpipers, sedge wrens—and the Huffman Prairie.

Dave, a land stewardship specialist for the Park District of Dayton–Montgomery County, has a special interest in the 109-acre reserve section on the Wright–Patterson Air Force Base known as the Huffman Prairie—he helped discover it. He was one of the first to notice the stands of grass called big bluestem, or turkey foot, grass that indicated the land had been one of the largest tall-grass prairies in Ohio.

His discovery of the prairie remnants was no accident. Dave was working on his master's at WSU; his advisor was Dr. Jim Runkle. At the time, Dr. Runkle was studying forest ecology around the WSU campus area. Dave was looking over Runkle's shoulder at some early 1800s surveyor's notes made by Israel Ludlow. He noticed prairie markings used as vegetation reference points and decided to check it out.

It's difficult to distinguish prairie grass from ordinary weeds, but Dave had gotten the "hang of seeing" prairie grass among the weeds. He prowled hedges and ditches marked by Ludlow's survey and found extensive stands of prairie grasses that had survived plowing and pavement on the Wright–Patterson site. There was some luck involved; because the base

mowing operation was running behind schedule, the grass had been allowed to grow taller than usual.

After the discovery, The Nature Conservancy, an international conservation group, took an interest in the project. They contracted with Wright–Patterson's Office of Environmental Management to inventory the animal and plant life on the prairie. The Ohio Department of Natural Resources has designated the prairie as a state natural landmark.

Dave is regularly consulted by the base environmental impact manager about when and where to mow.

Left alone, the prairie would grow into a forested state. Burning and annual mowing are necessary to keep it at the prairie stage. The Air Force need to keep a visually clear zone for its main runways is compatible with the effort to maintain the prairie.

As a land stewardship specialist, Dave's job of "preserving and managing for diversity" covers 8,000 acres divided into nine park reserves. His primary responsibility is conservation of the reserves, keeping at least 80% of the area in its natural state.

Dave notes that parks are becoming "more and more like islands surrounded by development and farmland." He helps manage the land for "those critters who like thickets and hedges," as well as those who prefer forests, grasslands, and ponds.

Dave also manages the land and its heritage with human critters in mind. The park reserves are designed with opportunities for low impact

David Nolin checks the stands of grass on the Huffman Prairie, at the edge of the Wright–Patterson runways.

recreation activities such as hiking and picnicking.

This past year, he has been primarily involved with the complete renovation of the Germantown Reserve underground nature center. The renovation is expected to be completed by the end of October and will be reopened shortly after that. The Park District is preparing the center as a year-round family educational facility that uses interactive displays and live animals to convey the Park District's Land Stewardship philosophy.

Dave's training in biology and his experience with the Park District have given him keen skills in managing wildlife and natural vegetation; he is working at protecting both yesterday's and today's environments for the rest of us. ▼

# Banking on the future with the help of biology

by Kay Blue

Banking for the future means something very special for Craig Ritter (78 B.S.; 82 M.S. Biological Sciences). Craig has been the Program Coordinator for the Lions' Eye Bank of West Central Ohio since it was begun in 1982.

The top priority for the Eye Bank is to provide eye tissue for the blind and visually impaired in the community. The Eye Bank takes responsibility for publicizing the need for donors, educating area donors and medical personnel, harvesting donated eyes, evaluating the tissue, and assisting physicians in allocating the tissues for transplant and research.

Dr. John Rossmiller of the WSU Biology Department led the search effort for prospective technicians to staff and manage the Eye Bank when it was begun in the early 1980s. Craig was one of the first recruits.

He trained at Tissue Banks International in Baltimore. Upon return, he and his staff began forming and promoting the local eye bank by working with the county coroners

and educating hospital personnel. They met with the potential donors' families and trained medical personnel to work sensitively with families.

The multi-faceted job of Eye Bank Coordinator suits Craig's many interests. He describes his job as more than just the "technical stuff" of working with donated eyes. He also is an educator, administrator, and fund-raiser for the Eye Bank. He cites the WSU general education program for leading him to biological sciences as well as providing him with the breadth of skills he uses daily.

Craig originally planned to become a medical technician, but a biology course convinced him that research biology was more intriguing to him. Classes from Drs. Kantor and Rossmiller in particular hooked him in the areas of molecular biology and genetics. After his undergraduate degree, he stayed on at WSU to pursue his master's.

As a graduate student, he taught four quarters of beginning level biology courses. He delighted in taking freshmen who were "kind of afraid of biology" and then "grabbing

some of them" with his intense interest in the subject matter.

Craig's graduate research involved sunlight and ultraviolet DNA damage and repair on human skin. He looked at normal cells and skin cancer cells trying to determine if and how the damaged cells would repair themselves. He found sunlight was more damaging than ultraviolet light alone.

His research resulted in two publications in international journals. He also found out that research often involved long hours with little recognizable progress and even less personal recognition.

Dr. Kantor had warned him that he could at best expect "acknowledgement only from other researchers" even though the research was one of the many steps needed to find potential cures for cancer. Craig likens the work of the research biologist to that of plumbers and carpenters whose work is essential but often invisible or forgotten. Research biologists are often forgotten when medical teams use their work to experiment with ultimately successful treatments.

Craig maintains his interest in biological research and follows the research journals. Perhaps someday he will return to that arena. Until then, the technical work he does at the Eye Bank keeps him in touch with the advances in biology.

He takes great satisfaction in the service the Eye Bank provides for the Miami Valley and the advances in corneal transplant surgery as a result of the research efforts supported by the Eye Bank donations.

Because of advancements in tissue replacements, corneas can now be removed by technicians like Craig and be kept vital for up to ten days. This allows doctors to schedule surgery on a non-emergency basis at the right time to get the best results.

Craig Ritter working with a slit-lamp microscope to evaluate a donated cornea for the Lions' Eye Bank.

Most corneal transplants are needed because of inherited eye diseases or because of trauma to the eyes such as acid splashes, cuts, or infections. That makes us all potential recipients as we consider the many possible hazards that threaten our precious ability to see.

Unlike many other transplant procedures, there is no need to consider blood type match for corneas. Consequently, this operation is successful more than 90% of the time. After a successful transplant, the patient may have renewed vision or see for the first time.

Corneal surgery is the most frequently performed human transplant procedure. In the last 25 years, there have been more than 250,000 corneal transplants nationwide.

Corneal transplants are the most common uses for donated eyes. However, there are many other worthwhile uses such as research and education. Craig recounts how donations from the West Central

Ohio bank were used in a California research project that identified potential damage to the eyes of people using a newly developed plastic lens.

Because of the many beneficial uses for donated tissue, no one should assume that his/her tissues would not be usable because of age or defects. Craig recently harvested the eyes of a 106-year-old donor.

Craig encourages us all to consider legally identifying ourselves as eye donors. It is simple enough to do. Just fill out the form on your driver's license or a donor card especially for eye donations (available at your local eye bank). Even after doing that, Craig points out that the most important thing is "to make sure that you next of kin is aware of your intent." It is that person who will ultimately make the decision upon your death.

Craig Ritter provides skilled stewardship for healthy biological investments on behalf of thousands of blind and vision-impaired people every year. ▼

## **The Lions' Eye Bank, then and now**

Before the Lions' Eye Bank of West Central Ohio was organized, a handful of Miami Valley eye surgeons managed their own programs. Patients sometimes waited as long as three years for a donation. The first effort to create an Eye Bank for the Miami Valley started at WSU. The original Eye Bank was housed in an examining room in the Fred White Center.

Dr. Michael J. Besson, assistant clinical professor in the Medical School, was one of the doctors who saw the potential for a formalized eye bank. He and the small number of other area eye doctors sought financial help from the Lions' Clubs and technical assistance from Tissue Banks International in Baltimore to form the local bank.

Donations in the Miami Valley have been generous and well coordinated by the Eye Bank. Corneal transplant patients now seldom wait more than six weeks to receive a new cornea.

The Eye Bank networks nationally and internationally with other eye banks to make sure that people needing corneal transplants will receive the best tissue possible in a timely manner. The West Central Ohio Eye Bank serves its own area physicians' needs first. State needs are considered next, then regional, national, and international. Miami Valley donations have been used in surgical transplants as geographically widespread as Argentina, Italy, and Trinidad.

The Eye Bank is located at 40 S. Perry Street, Suite 30, Dayton, OH 45402. Its 24-hour telephone number is (513) 223-4850. ▼

Electron micrograph of a cell from a mustard spinach (*Brassica perviridis*) seedling grown aboard the space shuttle. The microgravity of outer space alters the structure and function of cells, both plant and animal. This NASA-supported research is conducted by Dr. Randy Moore, chair of the Department of Biological Sciences. Randy is assisted by Jeffrey Amon, son of WSU faculty member Dr. James Amon.

## Biological Sciences: Excellence plus enthusiasm

by Kay Blue

"Understanding biology helps people function effectively in society," says Dr. Randy Moore, chair of the Department of Biological Sciences.

This message is being heard and acted upon by today's WSU students. The general education biology courses are among the most popular on campus; each quarter 1,200 students choose biology as one of their general education options.

Dr. Moore thinks the high enrollment reflects people's inherent interest in life, and the Department's commitment to teaching. He says, "We're serious about teaching."

The vitality of the Department is another reason for its popularity. Courses and funded research ranges from an introduction to the field to the cutting-edge of the discipline: organ functions, plants in outer space, aquatic biology, skin grafting, ecology, DNA studies, molecular biology, natural toxins, allergies, and biotechnology.

Dr. Moore matter-of-factly states that the goal of the faculty is to be the very best at everything.

"That's quite a challenge, but that's what makes this fun."

Based on their regular success at winning teaching awards and research grant, faculty are more than meeting their goals.

### AWARDS FOR TEACHING

- At the June 1990 Commencement ceremonies, Dr. Larry Arlian received the Trustees Award for Faculty Excellence in recognition of outstanding accomplishments in teaching, scholarship, and service. Dr. Arlian directs the Biomedical Sciences Ph.D. program.
- Dr. Wayne Carmichael won the university-wide "Leg of the Stool" award for research.
- Dr. Jerry Hubschman received the College of Science and Mathematics Award for Outstanding Teaching and the University Honors Program Teacher of the Year Award.

Dr. Larry Arlian, recipient of the Trustees Award for Faculty Excellence in teaching, scholarship, and service, pursues research on house dust mites, a source of allergens.

Dr. Hubschman's comment upon receiving the award reflects the Department's spirit: "I enjoy teaching because it's sharing what I'm interested in and I'm able to spark interest in the students. Since I'm interested in everything I teach, it makes it easy."

#### FUNDS FOR RESEARCH

The Department receives a significant number of externally-funded research grants, another form of endorsement for its work. During the 1989-90 academic year, the Department brought in about \$600,000. Since some are continuing grants, even more research funds will be available for 1990-91.

Four faculty members conduct research funded by the National Science Foundation (NSF).

Dr. David Goldstein studies kidney function in birds. Dr. Mary Jo Vesper studies plant hormones. Dr. Jim Runkle spent part of the summer in the Smoky Mountains conducting on-site forest ecology research. Dr. Wayne Carmichael studies chemicals produced by algae with NSF support.

The NSF is also supplying \$24,000 in a grant for Dr. George Kantor to purchase instrumentation for the molecular genetics lab. The university is adding additional funds for a total of \$60,000. Dr. Kantor, a leading authority on molecular biology and DNA repair, says that the equipment grant will enable WSU to teach modern biotech lab procedures that include manipulations of DNA, the molecule responsible for heredity, in a state-of-the-art procedure.

Complementing Dr. Kantor's course will be a new \$220,000 electron microscope and image-analysis system, purchased with NSF funds.

Dr. Kantor likens biotechnology's developmental state to that of computer science's 15 years ago. In other words, we haven't seen anything yet.

The Department has also been very competitive in receiving grants from the National Institutes of Health (NIH) and the National Aeronautics and Space Administration (NASA).

Dr. Kantor's research in DNA repair receives support from NIH. DNA repair is a key to understanding

Greg Shanower (89 B.S.) is currently a graduate student in Biological Sciences working with the DNA Fluorimeter quantitating DNA.

and finding cures for cancer and genetic diseases. Dr. Barbara Hull is using an NIH grant to study skin grafting. Dr. Arlian uses NIH support to research house dust mites, a source of allergens. His research is answering questions about how dust mites affect individuals with hay fever and asthma, if immunization could help asthmatics, and how mite levels in homes can be managed. NASA supports Dr. Moore's study of how roots perceive and respond to gravity.

---

---

***'Teaching is  
sharing what I'm  
interested in...'***

---

---

And there's more.

Dr. Allen Burton studies sediments in lakes and streams, funded by grants from the Environmental Protection Agency. Dr. Mark Mamrack's research is supported by the American Heart Association and Dr. Jim Amon's grants support his work in the Beaver Creek Wetlands.

#### COMMUNITY OUTREACH

The Department also looks to the future in its community outreach. With the help of a \$9,900 grant from the Engineering and Science Foundation of Dayton, it sponsors workshops for Dayton pre-college teachers as part of an ongoing pre-college science education program.

The program involves working with both pre-college students and teachers. Workshops, equipment, and seminars are used to improve pre-college science instruction.

#### STUDENT OPPORTUNITIES

Thanks to the teaching excellence and successful grantsmanship of Biological Sciences, WSU students have the opportunity to be at the forefront of this exciting science and its impact on our society.

Graduates at all levels will be qualified to fill the growing job market for industrial and medical biotechnicians, following career paths that lead toward a range of developments, from novelty plants to treatments and cures for cancers and genetic defects.

It is no wonder that biology is attracting today's students. Like the alumni that preceded them, they want to become architects of a better life in the future. ▼

# Alumna Jamie King at home as manufacturing CEO

by Kay Blue

The noisy clatter of fabricating machinery, the smell of metal mixed with oil, hard concrete floors...and standing comfortably in the middle of this setting, a young woman executive in a business suit, talking with the machine operators about a production problem.

Jamie King (80 B.S.B., Accountancy) is at home in this unusual setting as CEO and majority shareholder in Crowe Industries, Inc., a company which provides machining and assembly services. For two years, Jamie has been one of Dayton's few female owners of a manufacturing business.

That distinction, along with earlier career successes and a multitude of community service activities, earned Jamie a place among 5 finalists out of 22 nominees for the Career Woman of the Year Award presented by the YWCA of Dayton.

The criteria used to select the finalists included (1) contribution to her organization, which consists of career accomplishments, education/training, and leadership qualities; (2) contribution to her profession including activities and involvements specific to that profession, any

recognition/awards received, her support for/and of other women; (3) and her contributions to her community.

---

## *...proving a 'woman's place' can be anywhere she wants to be.*

---

How does an Arizona native become a candidate for Career Woman of the Year in Dayton, Ohio?

Jamie made her way east during the late 70s when her husband, currently a treasury director for Reynolds & Reynolds, was recruited by NCR. At age 21, Jamie decided that she wanted to pursue a career in accounting.

She carefully researched the universities in the Miami Valley looking for the best accounting program. She visited the many campuses and interviewed accounting professionals in the area.

"Everything pointed to Wright State University. It was considered the best in accounting then and has an even better reputation now," says Jamie.

Jamie saw her college career as a full-time job. She attended school year-round. She notes both advantages and disadvantages to being a mature, married student.

"Compared to the typical 18-year-old, I was settled, focused, and knew how to buckle down. On the other hand, it was difficult to study when my husband and young professional peers finished their work days and were free to relax and socialize," she says, looking back.

The goal was finally achieved. Jamie credits Wright State for giving her the quality education she needed to pass the CPA exam and then to move up quickly with Ernst & Whinney Accounting Firm, now Ernst & Young.

James F. Hammill, Ernst & Young partner, nominated Jamie for the Career Woman of the Year Award.

"Jamie understands the special challenge one faces as an executive in the community and business environment. She is aware of her skills. She is

Jamie King, Chief Executive Officer of Crome Industries, Inc., working with employee, Gwen Blaylock, on a height control valve for Delco.

an excellent communicator, both verbal and written, good administrator and outstanding people skills—and she knows how to use these skills,” he said.

Her skills become very evident as Jamie recounts her path to becoming CEO of her own manufacturing company.

#### **A BUSINESS OF HER OWN**

Jamie has entrepreneurial heritage—her father ran his own architectural firm. Jamie recounts his career philosophy as it guides her: “Having a profession and your own business is having double insurance.” Having achieved success in a prestigious accounting firm, she still had a yen for a business of her own.

While her own accounting firm would seem the likely avenue, Jamie had had a taste of industry from some of her accounting clients. The solid, tangible happenings on the shop floor appealed to her.

She says, “I like a manufacturing environment better than a service environment. If I had to do it over again, I probably would choose to be an engineer.”

Crowe Industries met her criteria. It had a specific niche in the market. She liked the looks of its strengths and its financial structure. It also had a partner, Don Clere, who has the “nuts and bolts” knowledge to complement Jamie’s business skills. And it had a large enough employee base so that she could delegate responsibilities when her role as wife and mother called for it.

Jamie is working to build her knowledge of manufacturing by taking self-study courses through the National Machine and Tooling Association. She looks forward to expansion of Crowe Industries on a “slow, steady basis.” She has a goal of keeping her company in the forefront of the industry.

Jamie remains active on many fronts. She is heavily involved in her

community. She is a trustee and past treasurer of the Montgomery County Historical Society, board member and Treasurer of the Kettering Community Improvement Corporation, and active in David’s United Church of Christ as a church school teacher.

She is involved in the WSU-administered Challenge 95, a regional planning and development project sponsored by the Dayton Area Chamber of Commerce as a board member, and the Kettering Board of Education Business Advisory Committee.

Jamie’s family is supportive of her many efforts. Her husband, Bob, is a partner in their family life. Her daughters, ages 7 and 3, are impressed by Mom’s factory setting.

Jamie says, “I hope they see me as a good role model and think, ‘I can do anything because Mom did what she wanted to.’”

It’s tempting to see Jamie as an atypical working parent. However, she points out that she faces many of the same challenges as other working parents, handling them well sometimes, not-so-well other times.

She says, “My key to making it work is flexibility in applying solutions and in attitude.”

Her advice to aspiring women executives is to gain as broad a spectrum of knowledge as possible and develop their abilities to display competency. She also encourages networking with men.

Jamie’s networking includes professional organizations such as the Ohio Society of Certified Public Accountants, the National Machining and Tooling Association and Women Entrepreneurs, Inc. She is a former board member and officer of the Association of Female Executives and a former member of Executive Women International.

Jamie King is proving that a “woman’s place” can be anywhere she wants to be. ▼

## Three alumni launch Share-A-Home program

by Kay Blue

*You've grown old. It's lonely living by yourself in a big home and the house and yard work is too much. You've thought about a retirement center, but you don't have the money—and you're certainly not ready for a nursing home! Besides, home is home and that's where you want to be. If only it weren't so difficult...or so lonely.*

This scenario will soon be familiar for many of us in the near future, 20% of us will be age 60 or older. As we move into our older years, we may have much to offer in terms of resources and companionship but no one with whom to share it.

Three WSU alumni are managing a new program in Montgomery County, Ohio, designed to revise this lonely scenario. Share-A-Home, a program of Catholic Social Services of the Miami Valley, will match elderly homeproviders with younger homeseekers.

Pam Fenn (87 M.S. Counseling: Gerontology), Bernice Ezekiel Brant, L.S.W., (86 B.A., Social Work), and Michele Foley (76 B.A., Social Work), are managing a \$40,000 grant from the Ohio Department of Aging to develop the program.

Pam, Bernice, and Michele are enthusiasm personified when talking about their new program and the good they feel it will do for elderly Montgomery County citizens.

Pam is the director of Senior and Volunteer Services for Catholic Social Services. She sees as the program helping those elderly citizens who "fall between the cracks." Bernice and Michele job-share a full-time position as coordinators of the Share-A-Home program.

Pam oversees the program as one of six that she manages for Catholic Social Services. Bernice and Michele are responsible for publicizing Share-A-Home, conducting interviews, checking references, facilitating matches, and providing follow-up.

**Share-A-Home**, continued on p.11

L to r: Michele Foley, Pam Fenn, and Bernice Ezekiel Brant in a Share-A-Home conference session.

### Three portraits of non-traditional success

Pam, Bernice, and Michele are prime examples of what graduates from a metropolitan university can do to enhance the quality of life for the community which educated them. All three alumni credit Wright State with making their careers possible. None of the three were typical students.

Bernice attended the University of Maryland during the 1940s. In 1981 at the age of 55, she returned to school and began her degree program at Wright State. She graduated "totally excited" five years later. Her current goal is to earn her Ph.D. by the time she's eighty.

Philip Engle, chair of the Social Work Department remembers Bernice as "a typical non-traditional students: female, older, thirsting for intellectual exchange, and very active in the learning process. She made it both fun and rewarding to be a faculty member." Bernice credits her success to WSU support programs—such as Expanding Horizons—for returning, non-traditional students.

Pam Fenn had earned a bachelor's degree in English from the University of Connecticut in 1961. When she decided to return to school for a master's degree in counseling with an emphasis in gerontology, she thought that attending the local state university would be "easy" as well as convenient—an attraction for the full-time working, single mother.

She was academically surprised—and impressed—by Wright State. First, WSU offered the relatively unusual major in gerontology. Second, it was rigorous and challenging. She especially credits Dr. Gregory Bernhardt, chair of the Department of Human Services, for the quality of the counseling program. "His vision of what the counseling program is and can be is excellent," she says.

Michele Foley describes herself as a "walking advertisement for WSU." College was something she had always wanted to do and she credits her professors for helping her take that motivation and run with it. "They thought I was bright." Michele also notes the great support Wright State gives the returning student: "When you want to relearn about learning, they're there to give you support."

All three faced special challenges in receiving their degrees, all prevailed to become successful graduates. In return, Wright State can take pride in three graduates who are out there making a difference. ▼

## Building Share-A-Home program with \$40,000 grant

The Dayton Share-A-Home program joins about 400 other such programs across the country. The concept originated in Philadelphia with the help of political pressure from the Gray Panthers. The National Shared Housing Resource Center in Philadelphia continues to be the largest program of this type.

Elderly individuals are open to the idea of having the companionship and security that having someone living with them brings, but are understandably reluctant to open their homes to strangers. Share-A-Home offers a secure way to find a housemate.

The home providers must be 60 or over to qualify for the program. According to Pam, appropriate tenants for homesharing would include students over 18, divorced or widowed persons, other mature singles, and people relocating to the Dayton area.

Homeproviders and homeseekers are carefully screened. Homeowners are interviewed extensively in their homes to make sure they have all the facilities necessary for comfortable shared living. The Share-A-Home staff contact three non-family references and conduct a character investigation of each homesharer applicant. The program is beginning to experiment with fingerprinting homeseekers as an additional security measure. Fingerprints will be checked by the Ohio Bureau of Criminal Investigation. Bernice and Michele know that the security measures may intimidate or offend some program applicants, but feel that most will appreciate the careful matching process.

After the initial interviews, a two-week trial visit occurs before a more formal commitment is made. If the trial visit is successful, a six-month contract is negotiated with the help of Bernice and Michele. Reduced rent can be made by the homesharer's agreeing to do some chores such as cooking, cleaning, or shopping.

Michele and Bernice will automatically hold follow-up sessions at the end of one month, two months, three months, and six. Small, sliding scale fees are charged for these services.

The Share-A-Home grant began in April, 1990. Even though the first months have been primarily devoted to publicizing the program, three matches have already been made. The goal is to make ten to twelve matches during the first year.

Dr. Ronald Eckerle, executive director of Catholic Social Services,

says, "We've been working with the concept for several years with a limited staff and are pleased to have this opportunity to develop a stronger program."

The Share-A-Home office is located in the Sunrise Center, 1320 E. Fifth Street, Dayton, Ohio 45402. For more information, call (513) 225-4381.

**Editor's Note.** Michelle Foley recently left the Share-A-Home program to assume a new position as an information specialist for Senior Information Systems. ▼

## Foundation News: Alumni special grants program gets under way

The Foundation Board of Trustees has begun soliciting Alumni Special Grants proposals from the campus community. The Alumni Special Grants Program is a new Foundation effort instituted to provide support for worthy University activities, programs, and research projects that would not be eligible for support from designated fund raising campaign receipts. The Special Grants Program is supported primarily with funds from alumni undesignated, unrestricted grants.

The criteria for funding include:

- The degree to which the proposed project or activity is likely to enhance the college or unit's ability to carry out its portion of the University's mission.
- The number of students, faculty, staff, or other likely to benefit from the proposed activity and the magnitude of the expected benefit.
- The degree to which the projects is likely to attract additional funding, enhance the University's

public image or otherwise increase support to the institution.

- Since a primary source or unrestricted funds is annual alumni gifts, those proposals which further the teaching mission of the University or directly benefit the students will be given the highest priority.
- Maximum award will be \$10,000 per award. Each award will be for one year only and should have the potential for achieving the final goal or intermediate goal within the one year award period.

All requests will first be approved by the respective college dean, or vice-president; the university president or his/her designee shall approve all requests before submission to the director of Foundation and Development.

The Foundation committees will review the proposal at least once per year. Doug Boyd, president of the Alumni Association, serves on the Foundation Board. ▼

## Highlights of Alumni Annual Fund

- Continues to grow as 1990 contributions exceeded 1989 by \$4,968
- Average gift rose by \$1.17 over 1989
- 63% was designated to specific programs within the Colleges and Schools as opposed to 36% for 1989

## School of Nursing welcomes new Dean, new Director of Student and Alumni Affairs

The School of Nursing has begun the 1990-91 year with two exciting additions to its administration.

Jane Swart, Ph.D., R.N., began her duties as dean of the School of Nursing August 15. Dean Swart was most recently assistant dean for Graduate Programs at the Medical University of South Carolina. A future issues of *Alumnews* will profile Dean Swart and planning and programming for School of Nursing Alumni.

Theresa Haghazarian is the new director of student and alumni affairs for the School of Nursing. Since October 1986, Theresa had been an academic adviser in the University Division. In addition to her student advising experience, she brings two master's degrees to the position: the first from The Ohio State University in College Student Personnel, the second from WSU in Business and Industrial Counseling.

Theresa was attracted to the School of Nursing position because of the opportunity to work with both recruitment and retention of students. She is looking forward to the long-term relationship with students that her roles offers.

"I'll have the satisfaction of seeing them coming and going," she says.

As part of her recruiting and retention efforts for the School of Nursing, Theresa hopes to convey the many dynamic opportunities available to the contemporary nursing student. She especially looks forward to targeting students who are coming to nursing as a second degree area, looking for a meaningful career change, and the older first-time students.

The healthy nursing job market is attractive and reassuring to students, particularly non-traditional students concerned about career and employment opportunities. Nursing salaries have also enjoyed an attractive upswing lately; the average beginning salary nationally is almost \$24,000 a year.

Terry Haghazarian talking to new nursing students at Freshman Orientation.

Theresa plans to meet the challenge of student retention head-on. The WSU School of Nursing curriculum has one of the most stringent science requirements in the nation. Regardless of their ability, many nursing students need both encouragement and support as they tackle these rigorous requirements.

With this in mind, Theresa will team-teach two sections of the Freshman Seminar course designed especially for nursing students. The Freshman Seminar is usually offered as a course designed to teach basic college survival skills such as time management, study skills, and how to prepare for exams. Theresa's sections will add special segments for the nursing students such as guest speakers from the nursing faculty, opportunities to meet upperclassmen, and field trips to area hospitals.

Theresa is also planning to involve alumni of the School of Nursing in the recruitment process. Interested alumni should contact Theresa at (513) 873-3131. ▼

## Financial Services Program wins Regents Program Excellence award

On June 14, the Ohio Board of Regents announced that the WSU Financial Services Program, a major within the Department of Finance in the College of Business and Administration, received a coveted Program Excellence Award. The Financial Services Program was one of 21 award winners in the state.

The Regent's Program Excellence Awards recognize existing undergraduate programs of distinction and provide funding to further enhance the selected programs.

The WSU Financial Services Program will receive approximately \$150,000 over the next two years for program improvements. The funds will be used, in part, to bring one or more nationally known financial planners as "practitioners-in-residence" over the next two years.

The visitors will team-teach with departmental faculty and conduct a variety of seminars and workshops, some of which will be open to alumni and the general public. They will also use their contacts in the professional financial community to expand the Program's internship component.

"The money is secondary to the prestige that goes with receiving the award," said Dr. Daniel Kaufman, chair and professor of finance and director of the Financial Services Program. "To be singled out as one of the best undergraduate programs in the state is a major accomplishment," he noted with pride. ▼

### New CSC record set

WSU faculty and staff set a new record in 1990 for the Campus Scholarship Campaign by donating more than \$112,250. This year, 1,199 faculty and staff donors contributed to the campaign; 47 departments had 100% participation.

Since its inception in 1977, 1,244 WSU students have received in excess of \$900,000 in scholarship funds through CSC. ▼

# Groundbreaking for Engineering and Computer Science Building

The groundbreaking for the Fritz and Dolores Russ Engineering and Computer Science Building took place on July 12. The building is named for Dr. Fritz Russ, a member of the WSU Foundation Board of Trustees and the WSU President's Club, and his wife of more than 50 years, Dolores Russ. Together they founded and operated Systems Research Laboratories, Inc.

President Paige E. Mulhollan said the building signals another step forward in achieving the University's Strategic Plan. The new building will provide administrative office space and serve as the primary site for teaching and research activities for the engineering and computer science college. The building design provides for 10 classrooms capable of holding classes varying in size from 15 to 100 students, 63 laboratories for undergraduate and graduate education, research offices for 88 faculty, and work space for at least 120 full-time graduate students.

"The planning and preparation for building of this magnitude have been enormous," said Dr. James E. Brandeberry, dean of the college, "and we are indebted to our friends in business and industry. They have joined us in making the 'business of education' their business, and for this we are sincerely grateful." ▼

Groundbreaking for the Fritz and Dolores Russ Engineering and Computer Science Building. (l to r) President Paige Mulhollan, Mrs. Dolores Russ, Dr. Fritz Russ, Dean Brandeberry, and Senator Charles Horn.

## WSU Business College receives reaccreditation and accreditation for accountancy program

The College of Business and Administration has received reaccreditation of its bachelor's and master's business administration programs from the American Assembly of Collegiate Schools of Business (AACSB).

It also received accounting accreditation for its accountancy program.

Approximately 1,200 colleges and universities in the United States offer undergraduate business degrees, but only 255 are accredited by AACSB; of the more than 700 master's programs, 257 are AACSB accredited. In accounting, only 85 schools are accredited at various degree levels.

According to Dr. Walt Goulet, dean of the College, the AACSB representatives were impressed with the ethics in business programs, the availability of computers for students, the orientation toward preparing students for the 21st century, and the number of high caliber students who also held part-time and full-time jobs.

During the accreditation process, the College was visited and evaluated according to standards widely accepted in the educational community by business school deans, accounting educators, and corporate representatives with detailed knowledge of management education.

"I've had the chance to experience business courses at Harvard University," said David Gutridge. Gutridge, chair and chief executive officer of JenJoy Corporation and Behm Quartz Industries who holds both bachelor's and master's degrees in accounting from WSU. "Harvard's program didn't appear any better than Wright State's."

"Accounting graduates from Wright State have for a number of years performed well on the CPA exam, thus those graduates have been widely sought after," said Gutridge. "When employers look at your degree, students who graduate from schools without accreditation are at a disadvantage."

"My professors were most impressive," said Bob Reed, president of Star Bank who has a bachelor's and a master's degree from WSU's business college. "They taught me how to think through processes and apply them to business situations, the groundwork for problem solving."

"The fact that Wright State University has AACSB accreditation makes me that much more proud of my degree," said Reed.

AACSB is a not-for-profit organization consisting of more than 800 educational organizations and corporations devoted to the improvement of higher education in business administration and management. It is recognized by the U.S. Department of Education and the Council on Post-secondary Accreditation as the sole accrediting agency for bachelor's and master's degree programs in business administration and accounting.

For more information, contact Marsha Adams, assistant dean of the College, at 873-3244. ▼

## Alumni alert—

# Career Services still works for you

Wright State's Career Services Office has a deal for you! It is the only Career Services office in the Ohio state university system that offers the same services to alumni as current students for the same price.

A registration packet may be purchased for \$2. The packet contains a *Job Search Guide*, Guidelines to On-Campus Interviewing, a quarterly interviewing schedule, and instruction on the completion of your computerized registration.

The materials are packaged in an envelope that may be used to protect the 20 copies of your resume required for registration. You may purchase the packet on campus or mail in a request adding \$1.50 to the cost for shipping and handling.

### COMPUTER MATCHING

Based upon your registration responses, Career Services loads information on your career interests, degree and other pertinent data into the computer program. Each day, employers contact the Career Services office to assist them in locating potential employees.

Based upon the requirements of the position, the computer matches registered students and alumni to the requirements. If your name is printed by the computer, Career Services pulls your resume and sends it with others directly to the employer. So, stay in the system!

### ON-CAMPUS INTERVIEWS

The Career Services office also arranges for on-campus interviewing. Opportunities to interview on-campus occur primarily in the fall and winter quarters. The number of employers who use this service has more than doubled in the last two years and more are expected in the coming years.

Employees that agree to interview alumni on campus include that information for printing in the *On-Campus Interviewing Bulletin*.

Lists of employers and their contact information are available in the Career Resources Center. Pay special attention to the *Job Search Directory* compiled from WSU Career Services personal contacts. Other national directories are available for use in the Career Resources Center in 126 Student Services Wing, M–Th 8:30 am–7:15 pm, F 8:30 am–5 pm.

### RESUME CRITIQUES

Career Services staff will also critique your resume within 24 hours of receipt. If you are on campus, you can turn it in and pick it up at the Career Services reception desk. If you are off campus, you may have your resume critiqued by mailing it in with a self-addressed, stamped envelope for return.

A *Job Search Guide* that includes tips and samples of job search correspondence, resume writing, and interviewing techniques has been compiled by the Career Services staff and is specific to WSU students and alumni. It may be purchased for \$1 or mailed for \$2.50.

### CALL FOR ALUMNI ADVISERS

In turn, alumni can also assist the Career Services office by informing them of any jobs you may have open in your enterprise. The office is also looking for alumni who would be willing to serve as advisory resources for current students wishing to explore career areas or alumni considering a change in careers.

Indicate your volunteer interest by checking the Alumni Student Career Consulting box on the *Send Us Your News* form on page 25.

For more information about the services available to you as Wright State alumni—or to report job openings or an interest in recruiting employees through Career Services, call or write the Career Services Office: 126 Student Services, Wright State University, Dayton, OH 45435, (513) 873-2556. ▼

## WSU FYI—

# Nutter Center enters final countdown

The final phases of construction are under way and only weeks remain before the WSU Ervin J. Nutter Center is completed.

"Daktronics Corporation will provide the \$750,000 scoreboard-message center system for the entire center," said Tom Oddy, director of the Ervin J. Nutter Center.

"The total package provides for scoreboards in the C.J. McLin Gymnasium, a message center at the box office, eight television monitors on the concourse, two color animated scoreboard-message centers on either end of the main arena, and the four-sided center suspended color animated scoreboard-message center in the main arena plus the exterior marquee located near the Nutter Center entrance off of Col. Glenn Highway."

Landscaping has begun around the Nutter Center and will continue through October. Oddy said, "The eight-acre lake adjacent to the center will provide an excellent backdrop for paddleboats, windsurfing, and canoes."

The Ervin J. Nutter Center has scheduled approximately 120 events with a projected attendance of over 500,000 patrons for the first seven months of its opening," said Oddy.

On December 15, a Gala Grand Opening will kick-off a month-long series of concerts, family shows, and sporting events to showcase the center.

"With its features, equipment, and facilities, the Ervin J. Nutter Center already has established a name for itself in the entertainment industry," said Oddy. "The center is a first-class entertainment and sports complex designed to meet the demands of the 21st century."

For more information on Wright State's Ervin J. Nutter Center, contact Tom Oddy at 873-3489. ▼

# Head Basketball Coach Ralph Underhill looks toward the 90-91 season and beyond

by Gary Giles

Sports Information Director

**Q:** You are coming off your finest Division I season to date. How does it feel to be back in familiar 20-win territory?

**A:** It's a good feeling. That's where we want to stay, and we think we've got the athletes to remain in that range. We've been forced to depend on some young players since we moved to Division I and our bid for 20 wins came up a little short the first two years. Last year we were still young, but we were also much bigger than we've ever been. Now that the Nutter Center is a reality, we can showcase our program to potential recruits and go from here.

**Q:** Did last season's success surprise you?

**A:** It probably did because we had a lot of young, untested kids. Early on, we weren't starting Marcus (Mumphrey) or Sean (Hammonds) and those two came on to be very key players for us. So we weren't sure what we had and didn't know if we could make it to 20 wins, although that's always our goal. To get 21 victories was a nice surprise for the staff and the players, too.

**Q:** The recruiting class you brought in last year was very highly touted. Did those players come along faster than you expected?

**A:** The magazine *Inside Sports* rated that recruiting class as the best among the nation's independents, including Notre Dame and DePaul, and it didn't even take into account Hammonds, who signed with us later in the summer. Of course Hammonds ends up being our leading rebounder, and Bill Edwards is our leading scorer and MVP. Our young players worked very hard, came together and really responded. We even played well on the road which is usually a sign of an experienced team.

**Q:** With ten letterwinners back, including four or five starters, you'll throw a lot of depth at your opponents this year. How does that affect the way teams play Wright State?

**A:** Being a pressing ballclub, it either makes a team extend themselves quite a bit or they're going to have to match our depth themselves. If we can continue to put the heat on throughout the whole game, it can be very telling, especially on your big people. That's where our depth can show.

**Q:** The only starting spot you have to fill this season is at point guard. How is that position shaping up?

**A:** Mark Woods will be a junior, and he's played a lot of point guard for us the last two years. He'll be a candidate to regain the starting spot, but I think you need two quality players to share time there because of all the running and pressing we do. At this time, we're looking at Renaldo O'Neal, a Dayton native who transferred from Charleston, to split time with Mark at the point.

**Q:** Besides O'Neal, you'll have two other newcomers on the team this year. How will they fit into the picture?

**A:** Mike Haley comes back for his sophomore year after sitting out last season, and he's a great scorer inside. He is the all-time leading scorer in the Dayton Public League, so we know what he can do with the ball. He has grown over the past year and may even continue to grow. The dimension he adds to our club will make us that much tougher to defend. The only freshman on the team, Andy Holderman, is a 6-1 guard with a great shooting touch. He'll help us overcome the inconsistent outside shooting we had last year.

**Q:** What will it mean to your program to move into the new Nutter Center this year?

**A:** The Nutter Center is a true state-of-the-art facility, and it's a tremendous opportunity to play there. The fans will love watching games there, from the seating to the sightlines to the scoreboards. Many of the 4,000 people that have bought season tickets haven't even seen the building; as fall progresses I think that number will grow. We want the same homecourt advantage in the new place that we had in the PE Building, and that happens with great crowds.

**Q:** How do you view the 1990-91 schedule?

**A:** Anytime you've got to play at Ohio State, Ohio University, Bowling Green, and Central Michigan, then you've got some big challenges on your hands. This is the toughest road schedule we've ever had. We'll open the season in Cleveland for the North Coast Tournament, and three of the four teams in the field won over 20 games last year, so we're jumping right into the fire. It will be a very difficult schedule for us, and if we put the same kind of numbers on the board that we did last season, the postseason tournament committees will be hard pressed to overlook us again.

**Q:** What are your thoughts about a possible conference affiliation?

**A:** I think getting in a conference gives you the best chance of getting in the NCAA tournament. There has been some talk of the nation's independents forming a conference, but it would be better for us to find a conference that has an automatic bid to the tournament. It will be interesting to see what happens with the current conference shakeup that's going on across the country. We'll continue to look for the best opportunity for us and make the right decision. We've got a lot to offer a conference. ▼

Junior Joanne Paxton and the Wright State women's soccer team will host four-time defending national champion North Carolina on October 14.

## SEASON TICKET UPDATE

Season tickets for the 1990-91 basketball campaign have passed the 4,000 mark. For more information on the ticket package, call 873-2771.

## HOOP SCOOP

Speaking of basketball, the Wright State men's team made a trip to Europe in late August for a series of exhibitions. The trip, originally scheduled to be spent mostly in Italy, also took the Raiders to Scandinavia. The basketball program's first visit to Europe was in the summer of 1986.

## GOING PRO

Four members of the 1990 Wright State baseball team spent the summer playing professional baseball in the minor leagues. Shortstop Keith Gordon (Cincinnati) and pitcher Mike Mathile (Montreal) were drafted in the second and third rounds, respectively, in the June draft. Gordon began his professional career in Billings, Montana while Mathile was sent to Jamestown, New York. Following the draft, pitcher Leonard Griffen (Cincinnati) and third baseman Brian Spears (Milwaukee) were signed to free agent contracts. Griffen was assigned to a Florida league, and Spears played in Arizona.

## COACHING QUIPS

Head women's volleyball coach Linda Schoenstedt has a new full-time assistant, Steve Opperman, who joined the program after one year at Dayton. The Raiders return three starters from last season's 28-10 squad which was selected for the Women's Invitational Volleyball Championships. Their season began September 1 at the Western Illinois Invitational. Home matches may be played at both the Nutter Center and the Physical Education Building.

## NORTH STAR NOTES

WSU becomes a full member of the North Star Conference this fall after spending one year as an associate member. The eight-team women's league sponsors volleyball and cross country in the fall, but not soccer.

## ALL-AMERICAN PUSH

Two fall athletes begin their senior seasons as legitimate Division I All-America candidates, volleyball's Micki Harris and golf's Frank Lickliter. Harris was an All-Midwest pick last year after leading the team with 65 solo blocks. Lickliter is in the midst of rewriting the WSU record book and helped the team to the NCAA regional last spring. ▼

# Alumna Heather Dine receives prestigious national scuba diving scholarship

Fighting for the underdog is what motivates Heather Dine (85 B.S. Psychology; 89 M.S. Anatomy). Whether the underdog is endangered wildlife, a threatened environment, or the interests of consumers, Dine wants to make a difference.

Dine is about to embark on an educational adventure that will give her more tools to make a difference. A scuba diver and a committed environmental activist, she has been selected for one of the diving world's most eagerly sought opportunities, the annual scholarship of the Our World-Underwater Society.

Dine, a laboratory coordinator in WSU's Department of Anatomy, first learned to dive in a scuba class offered at Wright State. She was encouraged to pursue the scholarship by former scuba instructor Dan Orr.

---

---

*'I respect people  
who make their  
cause their life,  
instead of  
verbalizing one  
philosophy and  
living another...'*

---

---

In the coming year, Dine will explore diverse underwater studies with the world's best—the National Geographic Society, the Cousteau Society, the Woods Hole Oceanographic Institute, and the Scripps Institute of Oceanography

Heather Dine preparing to take the big dive.

among others. One stop on her itinerary will be Egypt, where she will participate in research studying damage to coral reefs in the Red Sea.

Our World-Underwater is a not-for-profit organization whose goal is advancing education in underwater activities such as oceanography, marine biology, and underwater archaeology. Its scholarship is awarded each year to an outstanding diver who plans a career in these fields.

In addition to a \$7,500 stipend, the scholarship provides an introduction to a worldwide network of experts in underwater studies. Known as "Friends of Scholarship," they share their professional expertise and the hospitality of their homes with the scholarship recipient.

Doug Kessling, a Wright State graduate who won the scholarship in 1985, is now the director of diving at the National Undersea Research Center operated by the National Oceanic and Atmospheric Administration in St. Croix.

One past recipient is now a producer for the "National Geographic Explorer" TV series; another works for the Center for Marine Conservation in Washington, D.C.

Dine's career goal is working as an environmental advocate. She was an organizer of the Environmental Action student group at Wright State.

"We need to become more aware of the delicate fragility of our earth," she says. She carries that interest with her as a diver.

"There's a dichotomy underwater," she explains. "I see the incredible beauty of the natural world, and at the same time it breaks my heart to realize the repercussions of human activity there."

"It's a different world, something not everyone sees," she adds. "But as you dive, you also see the effects of what we're doing to the environment. You see trash floating by, and at the bottom of most lakes there are bottle cans, tires, even old refrigerators."

Dine traces her involvement in environmental issues to the example set by her brother Chris, a wildlife biologist who is working in Alaska on the clean-up of the Exxon Valdez oil spill.

"I respect people who make their cause their life, instead of verbalizing one philosophy and living another," she says. "That's what I want to do. This scholarship opens up a world of possibilities for me." ▼

## CLASS OF 1970

**Kent D. Anderson** (B.A.), founding president of the Miami Valley Chapter of NSFRE (National Society of Fund Raising Executives) and a member of the organization's national board of directors, was elected chair of the statewide governing board for the Ohio Caucus of the NSFRE. He received his certification as a fundraising professional in 1989.

**Mary Ann Hoffman** (B.S.) was named director of physical therapy at Leader Laureldale. She lives in Pottstown, PA.

**Allen E. Smith** (B.S.; M.Ed. 74) is a high school assistant principal for Milton Union Schools. His wife, **Sherry L. Smith** (B.S.Ed. 74), is also a teacher with the Milton Union Schools. They live in West Milton, OH.

## CLASS OF 1971

**Michael X. Elliott** (B.S.B.) is the assistant director of human resources for the United Way of the Greater Dayton Area. He and his wife, Connie, live in Dayton, OH.

## CLASS OF 1972

**Susan B. Herzog** (B.S.Ed.) is the director of finance for the Dayton Philharmonic Orchestra. She resides in Springboro, OH.

**Daniel J. Hill** (B.S.Ed.; M.Ed. 89) teaches in the Centerville City School District. He lives in Kettering, OH.

**Bonnie E. Melhart** (B.S.) will join the Texas Christian University faculty as an assistant professor of computer science in TCU's AddRan College of Arts and Sciences for the 1990-91 school year. She is an active member in the Association of Computing Machinery, Institute of Electrical and Electronics Engineers, IEEE Computer Society, and IEEE Reliability Society.

## CLASS OF 1973

**Toni Chambers** (B.S.Ed.) teaches at Saint Mary's Catholic School. Her husband, Robert, retired from the Air Force on July 1. Toni and Robert live in Mary Esther, FL.

**Richard H. Miller** (B.S.) is a marketing analyst for Burke Marketing. He lives in Amelia, OH.

## CLASS OF 1974

**Whitney C. Binz** (B.S.M.T.) is a medical laboratory supervisor III at Dorothea Dix Hospital. He and his wife, Jane, live in Cary, NC.

**George A. Fox, Jr.** (B.S.) is a medical service representative at Reker Labs. His son, Chad, will begin his freshman year at Wright State in the Fall of '90 majoring in engineering and playing soccer. George and his wife, JoAnne, live in Cincinnati, OH.

**Barry W. Mancz** (B.S.B.) is an attorney for Rogers & Greenberg. He lives in Kettering, OH.
